

ABSTRACT

A destination floor registering apparatus that can at any time and appropriately afford information on each floor to elevator users. For this purpose, a floor information display is provided for each destination button so that the contents of displays of the floor information display become visible from an operation surface of each of the destination buttons which a user operates in registering a desired destination floor, and the contents of displays of the floor information display are changed at any time according to operation conditions. Furthermore, information is displayed by a continuous change in colors, characters, or graphics to positively communicate the contents of displays of the floor information display to the user.
